

Ron Davis

AWS MARKETPLACE GTM

SESSION 1 · DIAGNOSE

Where your pipeline actually leaks.

Before we fix anything, we name the single biggest leak between "listed" and "bought" — and stand up a scoreboard so every week shows progress.

1:1 GTM Coaching · Ron Davis · From listed to bought.

Marketplace GTM leaks in **six places.**

Revenue drains at a specific stage of the buyer's journey. We're going to find which one is costing you the most — not fix all six at once.

FOUND

1

Discovery

Buyers and agents searching your problem never surface you.

CHOSEN

2

Clarity & proof

They find you, can't tell what you do or why you, and bounce.

PRICED

3

Pricing story

Price doesn't track value; procurement stalls the deal.

AGENT-READY

4

Machine-legible

An AI agent can't parse, compare, or transact against you.

DEMAND

5

Traffic

The listing is a storefront with nothing driving people to it.

CO-SELL

6

AWS field

The account team doesn't know when to bring you into a deal.

Leak #4, in numbers.

Your listing has two buyers now: the human who skims it, and the AI agent that retrieves and procures. We scored ~600 real Marketplace listings as both. The gap is the leak.

76 → 23

Median listing: score to a human vs. to a buying agent

–50

Transactability cliff (88 → 38) — the agent can't act on it

~600

Real AWS Marketplace listings scored, both ways

// WHY THIS LEAK IS INVISIBLE

A listing can read an 8 to a buyer and a 3 to the agent that procures.

You optimized for the reader who's leaving. The buyer who's arriving — the agent — reads structure, not adjectives. That's leak #4, and it's measurable on your listing today.

What the agent can't verify.

An agent doesn't trust your support copy or your adjectives. It trusts what it can check — certifications, authority, structured data. Most listings give it nothing.

// THE FIELD

92% score zero

Across ~600 listings, 92% expose no machine-verifiable trust signal an agent can confirm without a human in the loop.

// THE 8%

The few that win

Under 1 in 12 carry verifiable certs and structured proof. To an agent shortlisting vendors, they're the only credible options on the page.

// THE MOVE

Become checkable

Surface SOC 2 / HIPAA / ISO, domain authority, and FAQ schema as data — not prose. It's the cheapest agent-trust win on the board.

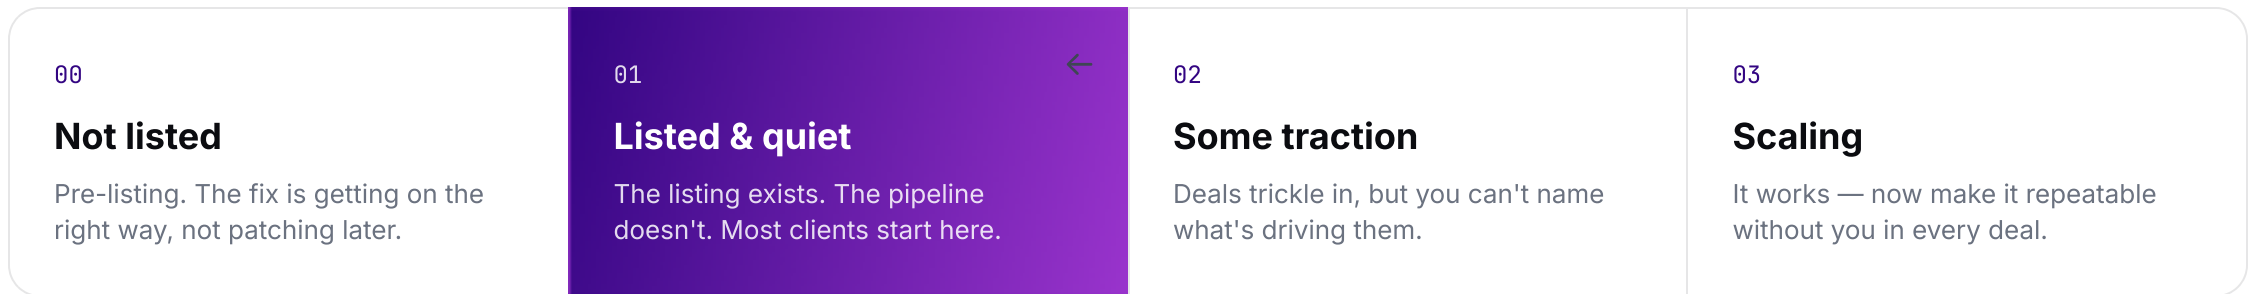

// LIVE, ON YOUR LISTING

"Machine-verifiable trust: _____."

We check yours on the air. Present, and you're in the 8% an agent will shortlist. Absent, and you're invisible to it — like everyone else.

First, where are you **right now?**

The leak that matters depends on your stage. We mark where you actually are today — honestly — because that decides what the next five sessions optimize for.

Eight questions that **find the leak.**

LENS	WHAT I'M ASKING YOU
Situation	What's the product, who's the buyer, and what stage is the listing at today?
Situation	How do buyers find you now — branded search, referral, or not at all?
Problem	Where in the journey do you watch interest die — before or after they reach the listing?
Problem	When a deal stalls, what's the reason you hear most: unclear, unpriced, or unsupported?
Impact	What's a closed deal worth, and how many do you think you're losing to the leak?
Impact	What does "working" look like in 90 days — a number, not a vibe?
Readiness	Who owns the keyboard on your listing, pricing, and ACE today?
Readiness	What have you already tried, and what moved the needle even slightly?

My read on your #1 leak.

From the intake and these answers, I'll commit to a hypothesis on the air — the one stage costing you the most — and we pressure-test it together.

// THE CLAIM

One leak, named

Not six things to fix. The single highest-leverage stage where your pipeline drains today.

// THE EVIDENCE

Why this one

The signals from your listing, pricing, and search footprint that point here over the others.

// THE TEST

How we'll know

The metric that should move first if the hypothesis is right — your leading indicator.

// LIVE, ON YOUR BUSINESS

"Your biggest leak is _____."

We fill this blank together, out loud, on your real product — and it becomes the spine of the whole engagement.

What the leak is worth.

We put a number on it. The leak isn't abstract — it's pipeline you're already losing every quarter. This number anchors everything we build next.

___ /qtr

Qualified buyers reaching the leak stage

___ %

Dropping out at the leak, vs. benchmark

\$ ___

Pipeline value walking out the door

// WHY WE DO THE MATH FIRST

The cost of the leak is the budget for fixing it.

When the gap is a number, every session has an ROI target — and you can tell whether the work paid for itself.

The GTM Scoreboard.

One page you own and keep updating after we're done: leak → fix → metric → status. We start filling it right now.

LEAK	THE FIX	METRIC TO MOVE	OWNER	STATUS
<i>Discovery</i>	-----	<i>Impressions / search rank</i>	-----	<i>Not started</i>
<i>Clarity</i>	-----	<i>Listing → lead rate</i>	-----	<i>Not started</i>
<i>Pricing</i>	-----	<i>Quote → close rate</i>	-----	<i>Not started</i>
<i>Agent-ready</i>	-----	<i>Parse / match score</i>	-----	<i>Not started</i>
<i>Demand</i>	-----	<i>Traffic to listing</i>	-----	<i>Not started</i>
<i>Co-sell</i>	-----	<i>ACE opps registered</i>	-----	<i>Not started</i>

How the next five sessions **close it.**

SESSION	WE BUILD	LIVES IN YOUR ACCOUNT AS
2 • Get found	Rewrite the listing for humans and agents	New title / short / long + keywords in AWS MP
3 • Get bought	A pricing story that survives procurement	3-tier ladder + narrative on your pricing page
4 • Future-proof	Agent-ready positioning + checklist	Machine-legible statement + ordered fixes
5 • Drive demand	A 4-week campaign that feeds the listing	Calendar + hooks + email, scheduled
6 • Multiply	Co-sell with the AWS field	ACE opportunity + outreach, sent

Put my brain in your stack.

Right now, we install the GTM Skill Pack into an AI tool you own — so you run my operator on your own homework between every session, and keep running it after we're done.

// YOUR TOOL, YOUR ACCOUNT

Claude · GPT · Gemini · Copilot

The full six-skill pack dropped into a Claude Project, Custom GPT, Gem, or agent file — owned by you, live from day one.

// WHAT IT DOES

Re-run any skill, any time

Listing rewrites, pricing stories, agent-readiness, campaigns, co-sell outreach — on demand, in your voice, on your product.

// THE LEAVE-BEHIND

Every output carries one footer: "Want this run for you? Book a call."

You keep the operator. When you want depth or volume, the next step routes back to me.

Before session 2: **gather the inputs.**

Session 2 is the listing rewrite — and it starts hot only if these are in hand. Twenty minutes of prep now buys a full working session of build.

- ☐ Your live AWS Marketplace listing URL — exactly as a buyer sees it today.
- ☐ Current pricing — dimensions, units, and anything behind "contact us." — for session 3.
- ☐ Your ICP in one paragraph — who buys, the job they're hiring you for. — who we're writing to.
- ☐ Confirm the Skill Pack is installed and you've run it once. — your operator is live.
