

THE LISTING OPTIMIZATION CANVAS

Rebuild your listing for humans and agents.

Fill the eight boxes in order. Each one feeds the next — by the last box you have a listing a buyer can choose and an AI agent can parse. Print it, or copy it into Notion / Figma.

1 Buyer & the job

Who is this for (role, company type) and what job are they hiring you to do? What trigger sends them to Marketplace?

2 The one outcome

The single result you deliver, in one plain sentence a non-expert could repeat correctly.

3 Title — outcome + searchable category

Lead with the buyer outcome and the category a human (or agent) would actually search. Not just your brand name.

4 Short description ≤ 280 characters

Legible to a human skimming and to an LLM parsing. Value first, no hype adjectives.

5 Long-description spine

One line each: **Problem** → **Outcome** → **How it works** → **Proof** → **Who it's for** → **Getting started**.

6 Search terms to claim

Requirement-shaped queries ("for HIPAA", "with SSO"), categories, and alternatives buyers compare you to.

7 Proof

Named outcomes, logos, or quantified results. Numbers beat adjectives. What can you actually show?

8 Agent-readable & next step

Is pricing legible without a call? Are units, specs, and terms machine-parseable? What's the single next step on the page (book / try / subscribe)?

// WHY THESE EIGHT, IN THIS ORDER

A great listing isn't written front-to-back — it's **reverse-engineered from the buyer**. Boxes 1–2 fix who you're talking to and the one thing you do. Boxes 3–5 turn that into copy. Boxes 6–7 make you findable and believable. Box 8 makes you transactable — by a human and, increasingly, by the agent doing the buying for them.

→ **A worked line, box by box**

Generic SaaS example — replace with your own.

BOX	WEAK (BEFORE)	STRONG (AFTER)
2 • One outcome	"AI-powered observability platform."	"Cut incident resolution time in half without adding headcount."
3 • Title	"Acme Cloud Suite"	"Incident Response Automation for AWS — resolve outages 2× faster"
4 • Short	"The leading next-gen platform for modern teams."	"Auto-triage AWS incidents, surface root cause, and route fixes. SOC 2. SSO. Live in a day."
6 • Search	"observability, monitoring"	"incident response for AWS, on-call automation, MTTR reduction, PagerDuty alternative"
8 • Agent-ready	"Contact us for pricing."	"Per-host/month, metered, standard contract — transactable without a sales call."

// THE TEST THAT MATTERS

Could an AI agent summarize your listing correctly — and act on it?

Read box 3, 4, and 8 as if you were a procurement agent comparing three vendors. If the value, the fit, and the price aren't unambiguous, you've found your rewrite. Clarity for the agent is clarity for the human.

Want me to run this on your real listing?

Bring your current title, descriptions, and pricing to a free 30-minute call and I'll fill this canvas with you — and hand you paste-ready copy plus the search terms to claim.
